

MUHAMMAD AHMED

BS Information Engineering & Technology Student

Lahore, Pakistan | +92 308 0142899 | ay8880625@gmail.com | [Github](#) | [Linkedin](#)

Summary

BS Information Engineering & Technology student at The University of Lahore with a strong academic foundation in programming, database systems, and web development. Developed practical skills through hands-on academic projects and enjoy solving real-world problems using technology. Seeking an internship opportunity where I can apply my technical knowledge, enhance my practical skills, and contribute to real-world software development while learning from experienced professionals.

Skills

Programming Languages: Python, SQL, C++, HTML, CSS, JavaScript

Frontend: HTML5, CSS3, React.js, Tailwind CSS

AI & Machine Learning: NLP & Basics of Machine Learning Concepts

Database: MySQL

Cloud Tools: Basics of AWS EC2 , Jenkins & Docker

Tools: GitHub, Linux, VS Code, Figma

Projects

1. Medicio – AI Healthcare Navigation Platform (Final Year Project – Ongoing)

- Designing Medicio, a web-based AI healthcare navigation platform to simplify patient access to healthcare services.
- Developing a symptom-based guidance workflow that recommends suitable doctors based on user symptoms and available healthcare data.
- Designing features that allow patients to locate prescribed medicines from nearby pharmacies and recommended medical tests from registered laboratories within the platform.
- Successfully presented and received approval for the Final Year Project proposal, with development scheduled to begin during the current semester.

2.Basic CI/CD Deployment Pipeline using AWS (Cloud Computing)

- Developed a simple frontend website using HTML and CSS as part of a university cloud computing project.
- Configured Jenkins to automatically fetch the latest code from a GitHub repository for deployment.
- Used Docker and AWS EC2 to understand the basic deployment workflow in a cloud environment.
- Applied basic CI/CD concepts by using Jenkins, Docker, SonarQube, and AWS EC2 in an academic deployment workflow.

3.Mobile Shop Virtual Assistant (Artificial Intelligence)

- Developed a web-based virtual assistant for a mobile shop with support for voice and text queries.
- Designed the interface to retrieve mobile phones, accessories, prices, specifications, and inventory details from a SQL database.
- Integrated backend APIs to process user queries and return relevant information based on stored database records.
- Displayed appropriate responses for unavailable products or invalid search queries.

Education

Bachelors of Science in Information Engineering & Technology (BS-IET)

The University of Lahore, Lahore, Pakistan | Expected Graduation: 2027 | CGPA: 3.51 / 4.00
